## “Recent Advances and New Directions in Cancer Therapy”

### COURSE DESCRIPTION

This conference aims to provide up-to-date information to the clinician regarding new advances in cancer biology, diagnosis, and treatment. It will bring together respected opinion leaders, practicing clinicians and scientists engaged in clinical cancer research to discuss the latest cancer diagnostic and therapeutic advances. Topics focus on the major cancers and drug development areas, including signal transduction/CDK inhibition, angiogenesis inhibition, PI3K/mTOR inhibition, antibody-drug conjugates, and immunotherapy, among others. This annual conference also includes interactive roundtable discussion forums with participation of cancer care experts from the California Cancer Consortium, and features renowned professionals from academia, patient advocacy, government, payer, industry, and business realms of cancer care.

### EDUCATIONAL OBJECTIVES

After participating in this educational activity, you should be able to:

- Identify signaling and immunotherapeutic pathways that are involved in the growth and metastases of various tumor types, and identify specific opportunities for therapeutic intervention.
- Describe recent advances in the molecular phenotyping of cancer and relate these to the optimal management of patients with cancer.
- Based on recent clinical trials, assess the efficacy of novel therapeutic strategies in the treatment of patients with cancer.
- Discuss new and emerging clinical trial designs that can test and validate new therapeutic strategies for cancer patients.

### TARGET AUDIENCE

This program will be of interest to medical oncologists, hematologists, surgical oncologists, radiation oncologists, diagnostic radiologists, pulmonologists, urologists, gastroenterologists, pathologists, fellow and resident trainees, advanced care practitioners, registered nurses, physician assistants, clinical research coordinators, biostatisticians, and others involved in oncologic drug development and clinical care.

### NEEDS ASSESSMENT

This course was developed in cooperation with the academic faculty and scientists belonging to the California Cancer Consortium to provide an annual in-depth exposure and review of new advances in cancer drug development, biology, biomarkers, diagnosis, and therapy. The agenda and format was specifically designed to address knowledge gaps identified from prior course participant evaluations and unsolicited comments from practicing oncologists (from private practice, academia) as well as scientists involved in cancer clinical trials. This area of knowledge will be best addressed by an in-depth conference on systemic therapy of malignancies (both solid and hematologic), with ample time provided for interaction by attendees with expert faculty. It is expected that this course will enhance the clinical competence of clinicians in managing the care of the cancer patient, and subsequently, improve patient outcomes.

### ACCREDITATION

The Medical Educator Consortium is accredited by the Accreditation Council for Continuing Medical Education to provide continuing medical education for physicians.

The Medical Educator Consortium designates this live educational activity for a maximum of 13.5 *AMA PRA Category 1 Credit(s)*<sup>™</sup>. Physicians should only claim credit commensurate with the extent of their participation in the activity.

### DISCLOSURE

The Medical Educator Consortium (MEC) adheres to the ACCME Standards for Commercial Support. All persons that will be in a position to control the content of the CME Activity are required to disclose all relevant financial relationships. Faculty disclosure forms outlining this information will be made available to all participants prior to educational Activity.
